## Getting Started with the SDK

12

### **Test Version of PDF Xpansion SDK**

The test version can be freely accessed after a quick registration. The test version is fully-functional but all documents are marked with a demo watermark. The examples included with the test version enable you to quickly begin exploring the SDK.

If you would like to use the test version for longer than three months, you will generally need to download a new, updated version.

### **Authorization**

After purchase you will receive your individual license which will be used to authorize the product. The authorization process is simple: just replace the **"pdf-xpansion.license"** license file in each project with the new license that you received from soft Xpansion.

The SDK will need to be re-authorized when upgrading to the latest version. Soft Xpansion will provide the new authorization file. A new version can be distinguished from the the previous version by checking the first part of the version number. For example: 11.xx.xx -> 12.xx.xx.
